Compiled October 19, 2026.

Every italic note in this document is guidance. Delete each one as you write its section, then set `\guidancefalse` *in the preamble: the PDF you submit carries no guidance.*

Summary of Changes

One paragraph here, 300 words at most. What changed in the paper between v1 and the final version, and why. A reader should be able to stop at the end of this paragraph and know an overview of what you updated.

Response to Reviewer 1

One numbered block per comment in the review, in the shape below. Every comment gets its own block, including the ones you changed nothing for.

1) *<the reviewer's first comment, quoted verbatim>*
   Modifications made. *What you changed and where: the section, and the sentence or the table. A reviewer should find it without re-reading the paper. If nothing changed, write "no change".*

   Argumentation. *Why that change, or why that refusal. Disagreeing is allowed and scores well when argued. Conceding every point scores the same as ignoring them all.*
   Weigh a refusal. Repairing the defects your reviewers found is marked in the paper itself, so a point you decline that the instructor judges well founded stays there as a defect and is marked there. A refusal earns its marks when the argument holds.
   Argue with the point.

2) *<the reviewer's second comment, quoted verbatim>*
   Modifications made.
   Argumentation.

And so on, one block per comment, to the end of the review.

Response to Reviewer 2

Same structure as above.
